Experience with visualization programs and libraries: Tableau, Power BI, Manim GL, Seaborn, Matplotlib, Pandas

Experience with Computer Aided Design programs: AutoCAD and Fusion

AWARDS

University of Florida's Innovation Showcase 2016 Make It Happen Award

Recognized for the prototype/concept with the greatest potential for implementation:

This project was a large-scale food dehydrator to reuse wasted food on farms. This would process the 40% of unused food into compost and water rather than leaving it as waste. The goal was to tackle the problem of food waste from the source and to help reduce costs and meet the needs of farmers. We prototyped the idea and collected data from local farmers and water/power municipalities to determine feasibility and cut costs.
